

# Four reasons to migrate remote desktop services to Azure Virtual Desktop

Lower costs while modernizing your infrastructure with a secure desktop experience anywhere you work

Small and medium-sized businesses today are looking for cost-effective and secure ways to support remote and hybrid work. Azure Virtual Desktop delivers on both fronts, empowering businesses with highly secure remote access to virtual desktops and apps from anywhere, on any device.

Azure Virtual Desktop is the only cloud virtual desktop infrastructure with full Windows 11 and Windows 10 multi-session capabilities that seamlessly extend to Microsoft 365 and other Microsoft services. And because you only pay for what you use, it's a great way to save too.

## Cost savings

Azure Virtual Desktop saves you money by only charging you for what you use with no long-term commitments or upfront payments. Plus, you can use existing eligible Microsoft 365 or Windows licenses.

## Full configuration and management control

Azure Virtual Desktop automates deployment to provide a consistent and reliable infrastructure and seamless desktop experience across an estate of virtual machines (VMs).

## Anywhere access to Windows 11 and Windows 10

Azure Virtual Desktop lets you configure and manage secure VMs that deliver familiar Windows 11, Windows 10, Windows Server, and app experiences from anywhere, on any device.

## Advanced security

Azure Virtual Desktop offers the most secure Azure virtual experience to date. Single sign-on and passwordless authentication provide a safe and simple log-on experience while Screen Capture Protection and Watermarking help keep your data protected.

## Learn More

We're a Microsoft partner with extensive experience working with Azure. We can assess your environment and help you upgrade your remote desktop services to enhance your overall business operations. To learn more about Azure Virtual Desktop, download the free e-book, *The SMB's guide to virtualization with Azure Virtual Desktop*.
